Comprehension:

Read the given passage carefully and answer the questions that follow:
Confidence and determination, though frequently invoked as personal virtues, operate less as innate endowments than as rigorously cultivated dispositions forged under conditions of uncertainty and resistance. Confidence, in its substantive sense, does not arise from the absence of doubt but from the disciplined capacity to act despite cognitive hesitation and anticipated failure. It is sustained by an internal economy of judgment wherein self-appraisal remains neither indulgently affirmative nor corrosively self-negating. Determination, closely allied yet conceptually distinct, functions as the temporal extension of confidence, manifesting not in episodic resolve but in the sustained endurance of purpose across protracted intervals of adversity. Where confidence enables initiation, determination secures continuation, converting provisional intent into durable praxis. Together, they constitute a dialectical apparatus through which individuals negotiate structural impediments, recalibrate objectives, and persist without succumbing to either reckless optimism or paralyzing self-doubt. Importantly, neither quality guarantees success; rather, they recalibrate the individual's orientation toward failure, transforming it from a terminal verdict into a provisional datum within an iterative process of refinement. In social and professional contexts, confidence devoid of determination collapses into performative bravado, while determination without confidence risks degenerating into unreflective obstinacy. Their productive convergence lies in an adaptive equilibrium that balances assertive agency with reflective restraint. Thus, confidence and determination should be understood not as emotive states or motivational slogans but as ethically charged practices, continuously enacted,

revised, and disciplined through action, setback, and reassessment.

SubQuestion No : 28

Q Two statements labelled Assertion (A) and Reason (R) are given below. Read the statements carefully and . select the correct option.

2 Assertion (A):

8 Confidence, as described in the passage, is compatible with the presence of doubt rather than dependent on its elimination.

Reason (R):

Confidence is presented as a regulated form of self-judgment that enables action even when certainty is incomplete.

A 1. A is true, but R is false.

n
s

2. Both A and R are true, and R is the correct explanation of A.

3. Both A and R are true, but R is not the correct explanation of A.

4. A is false, but R is true.

Confidence, in its substantive sense, does not arise from the absence of doubt but from the disciplined capacity to act despite cognitive hesitation and anticipated failure. It is sustained by an internal economy of judgment wherein self-appraisal remains neither indulgently affirmative nor corrosively self-negating. Determination, closely allied yet conceptually distinct, functions as the temporal extension of confidence, manifesting not in episodic resolve but in the sustained endurance of purpose across protracted intervals of adversity. Where confidence enables initiation, determination secures continuation, converting provisional intent into durable praxis. Together, they constitute a dialectical apparatus through which individuals negotiate structural impediments, recalibrate objectives, and persist without succumbing to either reckless optimism or paralyzing self-doubt. Importantly, neither quality guarantees success; rather, they recalibrate the individual's orientation toward failure, transforming it from a terminal verdict into a provisional datum within an iterative process of refinement. In social and professional contexts, confidence devoid of determination collapses into performative bravado, while determination without confidence risks degenerating into unreflective obstinacy. Their productive convergence lies in an adaptive equilibrium that balances assertive agency with reflective restraint. Thus, confidence and determination should be understood not as emotive states or motivational slogans but as ethically charged practices, continuously enacted, revised, and disciplined through action, setback, and reassessment.

SubQuestion No : 30

Q Why does the passage reject the idea that confidence and determination inherently guarantee success?

.
3
0
A
n
s

- ☒

1. Because failure is described as irrelevant to personal development
- ☒

2. Because success is portrayed as structurally inaccessible in most contexts
- ☒

3. Because perseverance is shown to undermine adaptive judgment
- ☒

4. Because both qualities are framed as situational and ethically constrained practices
